Dura-Bulk uses a hydraulic pumping system that provides extremely high flow, high pressure pumping capabilities with easy access for periodic maintenance. Our unit does not include the PLC with automatic pump shutoff. We have also eliminated many of the fragile electrical components that tend to fail. This ensures trouble free continual operation for years to come. For more information, visit www.eleetcryogenics.com, or call 330-874-4009.

Our robust trailer model is completely self contained and features a power unit to easily run the Dura-Bulk's extremely high flow hydraulic system.

Both the truck and trailer models feature a proven hydraulic system with stainless steel lines, high capacity coolers and ample reservoir capacity.

Dura-Bulk's clean design and open access make it easy to maintain and very durable in the field for years of trouble free service.
